

Score sheet for Rummikub

Up to 6 players

Date _____

Rounds to play

Agree on it before the first round. The most rounds won wins the game. The highest total breaks a tie.

After each round, write each player's points for the round, with a minus sign for a player left with tiles, and their new total. **Circle the score of the player who won the round.** At the end, count each player's circles and write the number in the Rounds won row.

Rounds won												

What each tile left on a rack costs. Numbered tile: the number on the tile. Joker: 30. Each player left with tiles scores minus their rack. The winner scores plus the total of everyone else's minus points. If the pool ran out, each minus is the difference between that player's rack and the winner's.
